Professional Experience

Systems Limited | Junior Consultant - Power Platform | CRM from Nov 2025 to Date

Responsibilities:

- Developed and customized CRM solutions using Microsoft Power Platform and Dataverse to support business processes and improve operational efficiency.
- Designed and customized Model-Driven Apps using Microsoft Dataverse to streamline CRM and business operations.
- Configured security roles, user permissions, and role-based data access within Microsoft Dataverse.
- Developed and maintained Power Automate flows for workflow automation, approvals, notifications, and system integrations.
- Enhanced existing Power Platform and CRM applications by implementing new features, improving performance, and resolving application issues.
- Delivered scalable business solutions by automating processes and optimizing workflows using Microsoft Power Platform.
- Developed Canvas Apps with online and offline functionality, enabling users to work effectively in both connected and offline environments

Projects

DHA – Dubai Health Authority

- Designed and developed Canvas Apps with both online and offline capabilities for healthcare field staff and office users.
- Implemented offline data synchronization, allowing users to capture and update records without an internet connection.
- Developed and customized Model-Driven Apps using Microsoft Dataverse to streamline healthcare business processes.
- Configured security roles, user permissions, and role-based access control (RBAC) within Microsoft Dataverse to ensure secure access to patient and operational data.
- Created and maintained Power Automate flows for workflow automation, approval processes, email notifications, and data synchronization.
- Integrated business logic and validation rules to improve data accuracy and operational efficiency.
- Enhanced existing Power Platform applications by adding new features, optimizing performance, and resolving production issues.
- Collaborated with business stakeholders to gather requirements, perform testing, and deliver scalable Power Platform solutions.

LAMEX Project:

Developed and integrated core functionalities within LAMEX's custom framework to enhance overall system architecture.

- Focused on building and optimizing plugins to extend platform capabilities and improve system performance.
- Collaborated with cross-functional teams to ensure seamless integration of new features with existing components.
- Wrote efficient, maintainable code and conducted thorough testing to ensure feature accuracy and optimal user experience.
- Actively identified and resolved performance bottlenecks, contributing to system efficiency and stability.

Assist Matrix (CRM):

Worked on enhancing and customizing the Dynamics 365 Sales module by implementing integrations, plugin development, and advanced client-side scripting.

- Developed custom C# plugins to automate business logic, validate data, and extend Sales module functionality.
- Implemented JavaScript client-side scripting to improve user experience, apply real-time validations, and customize form behaviors.
- Built and supported Sales module integrations with external systems using Web APIs for seamless data flow.
- Customized entities, forms, views, and business rules to align with business requirements.
- Optimized solution performance through efficient scripting, plugin optimization, and best practice implementations.

Net Matrix (CRM)

Developed a custom Canvas App for Asset Management to track asset lifecycle, allocation, status, and assignment workflows.

- Customized Dynamics 365 Sales module including entities, forms, views, business rules, and process enhancements.
- Worked on Project Operations, supporting project planning, resource allocation, task tracking, and operational workflows.
- Created C# plugins to automate business processes, apply validations, and ensure data accuracy within Sales and Project Operations modules.
- Implemented JavaScript client-side scripting for real-time form validation, UI enhancements, and business rule automation.
- Designed Power Automate flows for notifications, approvals, recurring processes, and automation of asset-related operations.
- Performed SharePoint data import and integrated SharePoint lists/documents with Dynamics 365 and Power Apps.
- Ensured seamless data flow between Power Apps, Dataverse, SharePoint, and Dynamics 365 modules.

Education

Bachelors | Completed in 2023 | UAF, Faisalabad

Major: Computer Science (CS)

Intermediate | Completed in 2019 | Govt. College, Pir Mahal

Major: ICS (Computer Science)

Matric | Completed in 2017 | Ghazali Public Higher Secondary School

Major: Computer Sciences, Mathematics, Physics
